

General Instructions for Assignments

Deadlines

- You have at least two weeks to complete each assignment from the day it is uploaded.
- The exact deadline of each assignment is stated in the instructions for that assignment.

Coding Guidelines

- For most assignments, you will get starter code and a set of tests.
- Please write your implementations according to the assignment instructions and the documentation in the starter code.
- Do not import any additional packages.
- Do not change/add/remove any parameters or the return type of the functions in the starter code.
- Please comment your code. Doing so will help us better understand your train of thought, and may lead to getting partial credit even if your implementation is not fully correct.

Tests

Usually the starter code will include a test script.

- You can use the tests to measure your progress in the assignment.
- The tests will also be used in grading your implementations.
- Keep in mind that the tests are not exhaustive, and it can happen that all tests pass even though the implementation is not completely correct.

Group Work

- You may work on the assignments alone, or in groups of 2 (not more!).
- You are free to switch partners for each assignment.
- If you work with a partner:
 - both of you must be taking the course for credit
 - both of you will receive the same score
 - both of you are responsible for understanding all implementation details of your submission

Honor Code

- Needless to say - do NOT copy other students' or other groups' work or allow others to copy your work.
- You're free to discuss and exchange ideas, but submissions that are too alike to really be considered as different will not be accepted.
- Include the honor code with the relevant name(s) at the top each script.

Submission

Unless otherwise stated in an assignment:

- Your solution should be submitted via Moodle as an archive file (e.g. .zip) containing your script(s) and any supplementary files containing work that should be graded.
- Do not include datasets or test scripts in your submissions.
- One submission per person/group
